COMPANY NAME:
Lux International-UK Ltd
ADDRESS:
40 Bloomsbury Way
London WC1A 2SE
E-MAIL: lux.uk@lux-international.eu

«We design and develop customized solutions, hardware and software products for lighting and control systems like control units, remote controls and electronic boards. Everything is strictly Made in Italy»

Lux International produces Led lighting solutions for indoor, outdoor, pools, saunas: RGB (multicolour) or WHITE at 2700K, 4000K, 5000K. Our Led Bars and circuits are entirely developed and manufactured in Italy by our facility located in Brendola, Vicenza, and we use exclusively high quality Led certified IES-LM-80-2008. We propose anodized aluminum profiles for indoor of different shapes and dimensions, with opaline or satined cover to allow an optimal diffusion of the light. Our range includes also stainless steel or white PVC profiles with resin IP68 for outdoor, pool and sauna lighting. The resin we use guarantees the highest reliability IP68 and high resistance against chlorine or salt water, atmospheric agents and extreme temperatures. We praise exclusive products developed in house as Dinamic Light, Candle Light and RGB Control Unit with 36 colours and 4 cromotherapy. LUX International, with a twenty-year experience in the electronics industry, has successfully committed itself to LED lighting, in particular for the wellness area, and our wide range of products has recently been enriched by two new elements: Spot LED "100" and Flexi.

SPOT LED "100"

Spot LED "100", the biggest of the IP68 Spot LED line, joins the Spot LED spotlights "1", "15" and "30", all made of AISI 316 stainless steel, with or without PVC outer casing. Spot LED "100", for PAR 56 enclosures, is designed for large pools, is fitted with around 100 LEDs and is available in white, RGB and RGBW versions. Made in an IP68 PVC case, it's self-dissipating and it doesn't need to be immersed in water for cooling. Extremely luminous and with reduced consumption, it's also suitable to satisfy the widespread need to replace old halogen lights with new LED lights in existing systems.

FLEXI

Flexi expands the already very extensive "Linear LED" line, which includes profiles in aluminum for indoor use, in IP68

PVC and profiles resined for high temperatures, all rigorously made with rigid or flexible bars of Lux International's production. Flexi is available in the IP68 PVC version, for application in swimming pools, fountains, outdoor, Steam room or in the silicone version suitable for high-temperature environments such as saunas, both with white and RGB light. Flexible, versatile and extremely bright, suitable for any environment and every need, creating a unique atmosphere.
